BYTEFLOW AI LABS · FREE GUIDE

10 AI Automations Every Business Needs

Grouped by industry, so you can go straight to the ones that fit how you sell — with the first step for each.

Most small businesses lose time and sales in the same places: slow replies to new enquiries, payments checked by hand, bookings arranged over ten messages, and leads that nobody follows up. Each automation below is designed to take one of those jobs off your team's plate. **A person on your team stays in charge** of anything unclear, sensitive or high-value.

For any business

Start here, whatever you sell

1. **Lead capture to CRM**
   Leads from Facebook and Instagram forms, your website and WhatsApp land in one place, with where each came from — no copying between apps.
   First step: list all the places a lead can reach you today.

2. **First reply on WhatsApp, in your wording**
   An automatic message designed to greet each new enquiry, ask the first useful question and let your team pick up the conversation.
   First step: write the one message you'd send if you replied yourself.

3. **FAQ assistant in Bengali and English**
   An AI assistant designed to answer common questions from your approved price list and FAQs, and hand over to a person with the full chat when it isn't sure.
   First step: collect the 20 questions customers ask most.

4. **Follow-ups that stop when the customer replies**
   Reminders sent on a schedule you choose, designed to pause as soon as the lead replies or books.
   First step: decide how many follow-ups feel polite for your customers.

Real estate

Agencies, brokers, developers

5. **Lead qualification on WhatsApp**
   Designed to ask budget, area and timing, log the answers in your CRM and alert the right agent.
   First step: agree the three questions that tell you a lead is serious.

6. **Viewing booking and reminders**
   Designed to offer real viewing slots from your calendar and send a reminder before the visit.
   First step: put your viewing availability in one shared calendar.

E-commerce and digital products

Online stores, courses, templates, subscriptions

7 Payment screenshot check (bKash, Nagad, bank transfer)

Designed to read the screenshot, match it to the order, flag a reference that was used before, and confirm or reject the customer on WhatsApp. Unreadable or mismatched payments go to a person. It never logs in to your payment accounts.

First step: keep your orders in one sheet or store with an order number on each.

8 Order and delivery updates

Designed to send order confirmations and courier tracking (Steadfast, Pathao or your courier) to the customer on WhatsApp.

First step: check whether your courier gives you a tracking link or API.

Clinics, travel and local services

Bookings, appointments, enquiries

9 Enquiry to booking request

Designed to collect the details you need (date, service, number of people) and hand your team a ready booking request.

First step: write down what you need to ask before you can quote or book.

10 Appointment reminders and review requests

A reminder before each appointment, and a short review request afterwards, sent on WhatsApp or SMS.

First step: pick where you want reviews: Google, Facebook or both.

Which one first?

Leads arrive but replies are slow	Start with 1 and 2, then 4.
Staff answer the same questions all day	Start with 3.
You sell property	Start with 5, then 6.
Customers pay by bKash, Nagad or transfer	Start with 7, then 8.
You take bookings or appointments	Start with 9, then 10.

A person stays in the loop

Anything unclear, sensitive or high-value goes to your team with the full context.

You own the system

It runs on your server and accounts, documented and handed over. No per-seat SaaS fees.

Built for how you sell

Bengali and English, WhatsApp-first, aware of bKash and Nagad — for businesses in Bangladesh and abroad.

Not sure which fits your business?

Book a free 30-minute consultation. Show us where leads, messages or payments get stuck, and we'll tell you honestly which one or two to start with.
